Lifestyle Information

The human body is designed to be healthy. The primary system in the body which coordinates health and function is the nervous system. Your nervous system is surrounded and protected by the bones of the spine, called vertebrae. Physical, emotional, and chemical stresses, common to our contemporary lifestyle, can result in misalignment to the spinal column as well as damage the delicate nervous system. The result is a condition called a Vertebral Subluxation. The remainder of the intake form addresses the possible factors which may contribute to vertebral subluxation in your spine which may be impeding your body's ability to heal.
